PROFILE

Senior full-stack software engineer with 14+ years of experience building production web applications, REST APIs, and microservices across Node.js, React, and Python. Former full-stack lead: promoted to lead a team of 3 and owned backend direction, code review, and AWS/Kubernetes operations for a platform serving Fortune 500 clients across 6 continents. Experienced in FDA-cleared medical AI and real-time Canvas/WebGL rendering, and recently shipped products built on multi-model LLM pipelines. Works comfortably with globally distributed teams across time zones.

EXPERIENCE

Independent, Seoul — Full-Stack Software Engineer

September 2025 – Present

- **오늘의 이야기** (oiyagi.com): Built and launched a daily Korean reading app with Next.js, Payload CMS and PostgreSQL on Vercel and Supabase, including Google and Kakao sign-in and 340+ automated tests.
- Designed its model-agnostic AI content pipeline: any model can write a story as a pull request (Claude, Codex, Gemini and Mistral so far), separate Claude and Codex sessions review it independently, a blind quiz check verifies it, and CI merges only the exact verified content before human approval.
- Built read-along audio with word-level highlighting, using Google TTS voices timed by a locally run whisper.cpp.
- **Mosida** (in development): Building a multilingual wedding invitation platform for Korean–foreign couples: a NestJS and Drizzle REST API in Docker on Railway, Next.js sites on wildcard subdomains, shared Zod contracts and direct-to-S3 photo uploads.
- **Korean Anki Miner** (github.com/benvasseur/korean-anki-miner): Built a Chrome extension (Vue 3, Manifest V3) that turns YouTube subtitles into Anki cards using Claude and Papago, with API keys isolated in the service worker.
- Studied Korean while building and shipping my own products.

LVIS Corp, Seoul — Software Engineer

August 2024 – September 2025

- Implemented canvas rendering for the EEG amplitude heatmap, increasing rendering speed from 3–4 FPS to a stable 60 FPS (up to 20x faster).
- Prototyped a user management module in PHP, then drove the full rebuild as a Vue.js admin and team management application with payment integrations (Stripe, KG Inicis).
- Contributed to NeuroMatch, LVIS's FDA-cleared cloud-based EEG analysis platform built with Vue.js, which leverages AI to detect seizures and other neurological events for clinical use in the US and Korea.
- Worked closely with the US team across time zones to align development efforts.

Lunit, Seoul — Front-End Developer

December 2021 – December 2023

- Developed Lunit SCOPE, a platform to detect cancer cells from whole slide images using AI, supporting pathologists across a globally deployed medical AI product line with TypeScript, React.js, WebGL.
- Collaborated closely with ML and backend engineering teams to integrate AI inference pipelines into the diagnostic platform, ensuring accuracy and reliability for clinical-grade medical use.
- Optimized rendering time by 50% when displaying 5GB whole-slide images containing millions of cells, using WebWorkers.
- Architected a monorepo environment using Nx and Turborepo to manage shared Design System libraries and applications, reducing code redundancy across the platform.
- Enhanced testing and deployment processes with CI/CD, Cypress and Vercel.

Global Coach Group, Seoul — Full-Stack Lead Developer

February 2019 – December 2021

- Designed and built a standalone Node.js/Express microservice for on-demand PDF report generation, owned end to end: an asynchronous job queue, REST integration pulling data from two upstream services (user accounts and the core coaching-process app), server-side aggregation (averages, min/max) feeding generated charts, PDF rendering, AWS S3 storage, and Lokalise localization of report content.
- Promoted from front-end developer to lead after one year, taking over technical leadership when the previous lead departed.
- Owned technical direction across the platform's backend (Django API and Node.js services), defining REST API and database (MariaDB) structure, setting specifications, and driving architectural decisions for a system serving Fortune 500 clients (Microsoft, IBM, LinkedIn, GE) across 6 continents.
- Led a team of 3 (2 frontend, 1 backend) in Agile/Scrum, owning code review, pull-request and quality standards, and release planning.
- Managed AWS/Kubernetes deployment and infrastructure operations for the platform.
- Managed the UI localization pipeline for 13 languages via Lokalise, coordinating with external partners for content accuracy.

3i Inc., Seoul — Full-Stack Developer

June 2015 – February 2019

- Spanned the company's shift from a web agency (custom Drupal/PHP modules and WordPress for Korean university library clients) to a SaaS product, including more than a year as a Node.js/Express backend developer on the 3D/VR content platform.
- Built real-time collaboration with WebSockets on the Node.js/Express backend, enabling multiple users to edit content simultaneously.
- Implemented authentication and role-based access control with Express across the platform.
- Worked across MySQL, MongoDB, and Redis for storage, caching, and session management.

Faire Savoir, Lille — Full-Stack Developer

May 2014 – May 2015

- Built public-facing tourism websites with Drupal end to end, from CMS configuration and theming to booking/reservation features and client-facing admin dashboards.

Élap, Lille — Developer

September 2011 – May 2014

- Developed and maintained financial software for public-sector organizations under strict regulatory and accuracy requirements, building features for expense and stock management, automated receipt processing, and invoice generation.

EDUCATION

Université Lille 1, France — DUT Informatique, 2011

- 2-year university degree in Computer Science.

SKILLS

- **Front-End:** TypeScript, React.js, Next.js, Vue.js, Vite, AngularJS, WebGL, Canvas, Jotai, Pinia, Vuex, CSS, Tailwind
- **Back-End:** Node.js, Express, NestJS, Payload CMS, Python, Django, PHP, REST API, Microservices
- **AI:** LLM API integration, Claude API, OpenAI API, Mistral API
- **Auth & Security:** JWT, session-based authentication, role-based access control
- **Testing:** Cypress, Jest, Unit Testing, End-to-End Testing, CI/CD, Playwright
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Linux, Git, GitHub, Vercel, Sentry
- **Methodologies:** Agile, Scrum, Code Review, Software Development Lifecycle, Object-Oriented Programming
- **Database:** MySQL, MariaDB, MongoDB, Redis, PostgreSQL
- **Other Tools:** Jira, Figma, Stripe
- **Languages:** Native French, Fluent English, Conversational Korean (TOPIK 2)
